

What's NEW in TEST Products for the US Power Industry,

CIRCUIT BREAKER TEST gets more portable !

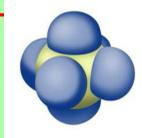

CAT series of **Breaker timing/ motion analyzers** add **DRM** ability plus **Both Sides Grounded** test option. Built-in 200A **Micro-ohmmeter** on some models. Pre-insertion resistor (**PIR**) measure and graph.

Free PC software and free up-grades.

New RMO-H22 low cost (<\$6K) handheld **micro-ohmmeter**. **Up to 200 AMPS** TRUE DC, ripple free current. Battery powered. Uses **hi-energy Li-Po** technology, weighs 2 lbs. Great for lift bucket work.

What's NEW with the automatic, highly accurate and consistent readings of **RH Systems 973-SF6 3in1 analyzer** is that it is the only 3in1 SF6 analyzer that is **100% supported within USA** for service and calibration (AZ). Max. 2 weeks

DV Power advances **portable test for CB's**. **CAT-H handheld 3ph CB timer** w coil control built-in, **off-line test**. **CAT-P** model adds First Trip **on-line test**. Both lightweight with clear useful displays

TRANSFORMER TEST gets more portable !

All DV Power products carry a 3 year warranty and are serviced in Florida. Extendable to 4 years for qualified customers.

new TWR-H combo WRT and TRT 1ph., Demagnetizer. Available Jan 2021 Single phase. X max 10A DC, H max. 2 ADC. Ratio up to 40VAC, Perfect for pad mount transformers, LV,MV

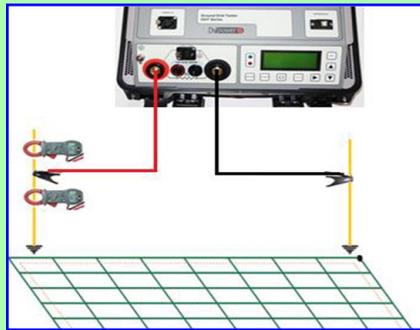

What's NEW in TEST Products for the US Power Industry,

BATTERY Bank TEST gets less costly !

BVS-4 quad module for cell by cell battery scanner, reduces scanner cost by 40% over single cell by cell scanner module. BLU load series now goes up to 800VDC and 42KW per box

Test **substation ground grid integrity** with this specially modified 300AMP micro-ohmmeter. **DV Power** model GGT500 was developed in conjunction with a USA utility to provide portable, rugged test set to follow this accepted effective procedure. **Finds defective grid points** due to corrosion, vibration, bad cable welds, loose clamps or poor apparatus ground connection leads.

CoroCAM CC6HD corona imager: Synchronized zoom for UV and visual image, wide dynamic range, Best IFOV, wide viewing angle, adjustable sun screen, uses commercial local batteries, GPS, USB, SDRAM std. Fast boot (6 sec). UV gain, threshold and integration adjustable for optimized clear image.

Model CC8 above adds hi-res thermal imaging plus viewfinder.

CT/PT Tester

Transformer **TTR** for **true 3 phase** turns ratio testing. Fully automatic, measures turns ratio, phase shift, excitation current and **auto-detects vector groups**. True means Three phase generate and three phase measure. Displays accurate phase readings, other TTR's cannot. TRT400 has 1, 8, 40, 100, 250, and now **430 VAC** ranges for CT thru to largest power transformers. **Auto-tap-step** control/measure thru OLTC taps lets PC do the work.

ISA's iCT1 Measuring turns ratio, polarity, phase angle, saturation tests. **Fully automatic mode** to cycle through all 5 taps of a CT and show ratio and saturation points. **High accuracy 0.1 %** with typicals of 0.05%, so adequate for verifying 0.1 metering CT's. Data extraction via USB to PC software, Memory stick. Modern 7" display.
